SECTION V

1. Based on the available prior art, claims 3 and dependants are formally new.
However, regarding inventive step the following considerations need to be done:
Claims 3 and dependants claim the use of fumaric acid derivatives in association with glucocorticoids for the treatment of asthma and COPD. It is well known that glucocorticoids are successfully used in the treatment of asthma and COPD, therefore this association would be obvious to the skilled man. Said combination could eventually be inventive only if a surprising effect arises (e.g. synergisms).
The applicant is request to provide comparative examples or experiments in support of the above-mentioned claims.
2. The applicant's attention is drawn to the fact that independent claim 18 and independent claim 19 and dependants as they stand could give rise to a non unity objection in a later stage of the procedure.
